

MAKING A MILKBOTTLE COD

1

YOU WILL NEED

A clean milk bottle, some cardboard, two bottle caps, a pipecleaner, scissors, celotape and felt tip pens,

2

MAKE THE FINS

Draw on the card some fin shapes, leaving a flap at the bottom which will be used to stick the fins to the body. Decorate them!

3

ATTACH THE FINS

Put celotape on the flap, fold it where the fin starts and stick to the body.

For the small pectoral fin (the one near it's gills!), make a roll of celotape with the sticky side out- stick the fin to one side and the bottle to the other. You could also use glue!

4

ADD DETAIL

Use a permanent marker to draw on gills, the lateral line (a magic line that helps fish to know what's going on!) and draw an eye in the upside down bottle caps! Stick the eyes on with another celotape circle.

5

ADD BARBELS

Cod have barbels, similar to whiskers, which help them know what's happening. Add these by cutting some pipecleaner to about 5 cm and bending it in half. Then unscrew the milk top, rest the pipe cleaner against the bottle and screw the top back on with the pipecleaner in between.

6

MILK BOTTLE COD!
