

We're Hiring!

Senior Science Officer – Seagrass Habitat Mapping

This post can be based either in Edinburgh or South Wales depending on the candidate.

Are you ready for a new challenge? Looking for a rewarding role in Marine Conservation?

We are Project Seagrass, a global charity working to save the world's seagrass meadows. We're on a mission to lead societal change to enable the recognition, recovery, and resilience of seagrass ecosystems globally—ecosystems that provide biodiversity, equitable and sustainable livelihoods, and planetary life support.

We lead, champion and communicate cutting-edge scientific research. We work with governments, NGOs, universities, businesses, communities and change makers to conduct participatory science and deliver collaborative action. We provide tailored support that is both adaptive and transformative to enable others to save the world's seagrass, whether that's with capacity, engagement, learning or resources. To save the world's seagrass, we need to have a collective passion and drive to understand seagrass and work to conserve it.

Sound like an organisation you'd like to be part of?

We are particularly keen to hear from innovative individuals with an aptitude for developing and applying novel approaches aimed at standardising, improving and streamlining spatial data workflows. The role will also offer the opportunity for occasional nearshore and offshore field work.

As well as this, the Senior Science Officer will be responsible for:

- Create and maintain metadata for the description and documentation of mapping data (basic curation).
- Process and transform mapping data into standardised formats and produce high quality seagrass habitat maps.
- Quality control of mapping data, data products and metadata, and submission to data publishers (e.g. PANGAEA).

Benefits of working with Project Seagrass

- Hybrid & flexible working
- Generous leave allowance
- 5% pension contribution
- Employee Assistance Programme
- Bike to work scheme
